Office Action Summary

Application No.

09/346,719

Applicant(s)

ANAYA ET AL.

Examiner

Alain L. Bashore

Art Unit

3624

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11-3-04.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 44-63 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

The previous office action is re-issued with a new 35 U.S.C 101 rejection and deleted 35 U.S.C 112 rejection.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 44-52 are rejected under 35 U.S.C. 101 as non-statutory because the method claims as presented do not claim a technological basis. Without a claimed basis, the claims are interpreted as involving no more than a manipulation outside of a technological art and therefore non-statutory under 35 U.S.C. 101.

In contrast, a method claim that includes in the preamble and body of the claim structural / functional interrelationships that are solely by computer (and non-trivial) are considered to have a technological basis and thus within the technological arts [See Ex parte Bowman, 61 USPQ2d 1669, 1671 (Bd. Pat. App. & Inter. 2001) – used only for content and reasoning since not precedential].

Claims which are broad enough to read on statutory subject matter and on nonstatutory subject matter are considered nonstatutory [see In re Lintner, 458 F.2d 1013, 1015, 173 USPQ 560, 562 (CCPA 1972)].

The independent claim has no technical basis in the preamble.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 44-63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilson in view of (Zusman et al and Kampe et al) in further view of Lange.

Wilson discloses market event data received by a plurality of feed lines (fig 1) which is then translated into common formats (col 2, lines 38-44; col 6, lines 61-67; col 7, lines 1-7; col 7, lines 39-55). Mechanisms (fig 1) receive the data after it has been processed by a gateway (1) which is then disseminated. A private network is disclosed (col 4, lines 5-16).

Wilson also discloses placing time data on incoming messages as a means of accurately identifying and flagging messages for later processing (col 6, lines 45 et seq) and to provide an platform compatibility to facilitate network communications over disparate network architectures and protocols (col 4, lines 1 et seq).

Art Unit: 3624

Wilson discloses market session data (col 5, lines 4-10), line (col 5, lines 60-67; col 6, lines 1-4), feed (col 4, lines 52-59), message type (col 6, lines 52-67), and original identification (col 5, lines 26-32).

Since the mechanisms to Wilson include processors that manipulate data, there are “engines” present. Since data is disseminated there is present “publishing”.

Since Wilson’s gateway describes processing constrains (col 7, lines 10-14) and use of a buffer (col 6, lines 5-11), there must be present data with FIFO constraints, thus market event data in a “queue”.

Wilson does not disclose:

- attaching timing data to the received message, including time extracted from the received message, and a stamp indicating receipt time at the receiver object and other data;

- activating a function to translate received message into market event data;
- receiving in an object or activation of objects to perform recited functions – i.e. the use of object oriented language (as now claimed in claims 44, 53, and 55);

- a stamp indicating a receipt time at the receiver function;

- time comparison of messages as recited in claims 45, 54, and 56;

- sequence number registration or updating;

Art Unit: 3624

validation of market event data further including with: gap data, duplicate message discarding/tracking; and, fields within a market event object format.

Zusman et al discloses translating a portion of received messages into messages having a common format (col 6, lines 26-31).

Kampe et al discloses market event data as received messages (col 1, lines 45-48).

It would have been obvious to one with ordinary skill in the art to translate received messages into market event messages to Wilson because of what is taught by Kampe et al and Zusman et al.

Kampe et al teaches that received messages having market event data must be continuously updated in a synchronous and compatible fashion (col 1, lines 20-67; col 2, lines 1-36). Zusman et al teaches accuracy and timeliness of financial data (col 2, lines 5-10) including standardization of message formats for delivery purposes (col 6, lines 25-42).

Zusman et al discloses a time stamp (col 9, line 8) for input messages, time comparison of blocks of messages (col 9, lines 19-22), sequence number registration

Art Unit: 3624

and updating (col 10, line 11), validation of market event data with: gap data (col 9, lines 28-29), duplicate message discarding/tracking (col 9, lines 30-34).

It would have been obvious to one with ordinary skill in the art to include sequence number registration and updating because Zusman et al teaches assigning sequence numbers for the purposes of message validation (col 10, lines 9-11) and updating for purposes of data manipulation (col 15, lines 1-10).

It would have been obvious to one with ordinary skill in the art to include validation of market event data because Zusman et al teaches regional users require customized services (col 4, lines 15-16).

It would have been obvious to one with ordinary skill in the art to include validation of market event data with: gap data and duplicate message discarding/tracking because Zusman et al teaches such for purposes of message consistency requirements (col 9, line 18).

It would have been obvious to one with ordinary skill in the art to include a stamp for a receipt time to Wilson because Zusman et al teaches that a stamp is a conventional header for input messages (col 9, lines 8-9).

Art Unit: 3624

It would have been obvious to one with ordinary skill in the art to include time comparisons as recited in claims 45, 54, and 56 because Zusman et al teaches correction by requesting re-submission if data included with the message is inconsistent with protocol (col 9, lines 22-34).

Wilson in view of (Zusman et al and Kampe et al) does not further disclose:

receiving in an object or activation objects to perform functions – i.e. the use of object oriented language.

Lange discloses the use of object-oriented language (col 90, lines 35-67).

It would have been obvious to one with ordinary skill in the art to include object or activation objects to perform functions because of what is taught by Lange. Lange teaches as common for servers that receive market data to utilize object oriented techniques (col 90 , lines 42-44).

It would have been obvious to one with ordinary skill in the art to include fields within a market event object format because Kampe et al describes messages as inherently having information within fields (col 5, line 13).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alain L. Bashore whose telephone number is 703-

Art Unit: 3624

308-1884. The examiner can normally be reached on about 7:00 am to 4:30 pm (Monday thru Thursday).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vincent Millin can be reached on 703-308-1065. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
